AIR BAG SYSTEM

Shock Buffering Protection System

Inflates fully in 0.5 second.

activation distance

Key ball

As soon as a rider is thrown away from the motorcycle, the airbag will be activated.

Airbag structure

CO2 gas released from the gas cartridge inflates the urethane airbag instantly.

- Key box** holds a CO2 gas cartridge.
- Key ball** to be pulled out to release the gas into the airbag instantly.
- Coiled wire** to be connected to a proper place of the motorcycle
- One-touch release** to connect/disconnect a coiled wire when getting on/off the motorcycle.

- Neck airbag**
- Chest airbag**
- Sides and back airbag**
- Hip airbag**
Hip airbag hangs down when inflating.
